Building into
the Future

The US Air Force Life Cycle Management Center - Force Protection Division delivers a family of Integrated Base Defense Security Systems (IBDSS) to provide electronic capabilities to support and enhance security and assist Air Force Security Forces (SF) in protecting assets and personnel at nuclear and non-nuclear fixed and tactical sites around the world. IBDSS provides for design, installation, test, and sustainment of a system of hardware and software to protect an entire base with perimeter/flight line area intrusion detection, alarm reporting and display, remote alarm assessment. Fixed-Site systems are delivered as permanent security systems to protect high priority assets, with a focus on PL 1 (nuclear and non-nuclear), 2, 3, and 4 resources such as aircraft, munitions, and command and control centers.

Since 2006, Titan has supplied, installed, supported and maintained components of the IBDSS at seventy (70) US Air Force and Air National Guard Bases in the CONUS. Titan has performed a wide scope of work for the Air Force for IBDSS, FPS2, FPS3, and now FPS4 prime contract holders.

This includes participation in the design of integrated systems of software, and hardware, and to supply, install, configure, maintain & troubleshoot intrusion detection sensors, cameras, computer servers, storage, network & communications equipment, workstations, fiber optic and coaxial copper cabling, conduit, enclosures and mounting.

Titan and its predecessor videoNEXT have supported the Hanscom AFB IBDSS system continuously since 2006 through a series of individual subcontract agreements with prime contract holders.
